Under the Callaway System a player's handicap is determined after each round by deducting from his gross score for 18 holes the scores of the worst individual holes during the first 16 holes. The table below shows the number of "worst hole" scores he may deduct and the adjustment to be made, based on his gross score. For instance, if his gross score for 18 holes is 96, he turns to the table and opposite that score finds that he may deduct the total for his three worst holes scored on Holes 1 through 16 inclusive. Thus, if he has one 9, one 8, and a 7, his handicap totals 24. From this total further plus or minus adjustment is then made according to the adjustment shown at the bottom of each column. For a gross score of 96 the adjustment requires a deduction of 2, resulting in a final handicap of 22. Thus 96 minus 22 handicap equals a net score of 74.
